

Cloud computing and infrastructure services

Transform to digital with hybrid IT and multi-cloud solutions

In our digitally driven, information-fueled workplaces, our most critical data needs to be protected, but not at the expense of access and control. That's why important work happens in the cloud. We develop the capabilities that allow our customers to host secure, reliable and agile cloud computing workloads. Cloud has never been a "one size fits all" solution. Specific business needs and application workloads drive platform decisions and as the landscape continues to change, the need for a hybrid delivery strategy is becoming more and more desirable in order to address the diverse needs of an organization.

Hybrid cloud spending is on the rise, with an increasing number of enterprises adopting a multi-cloud strategy. Most organizations are already in an evolving state toward their cloud solution, with some cloud instances already running or planned.

Perspecta cloud services

Perspecta delivers cloud offerings that leverage best-in-class commercial technologies to drive innovation and achieve true interoperability. Our cloud computing and infrastructure solutions enable customers to host their workload on the optimal platform across private, public and hybrid cloud, as well as, legacy infrastructure environments.

Our proven services help you rapidly modernize your infrastructure, and securely move and manage workloads to the most

appropriate cloud environment. We also provide third party assessment (3PAO) services to help civilian, defense and intelligence agencies achieve FedRAMP and DoD SRG compliance.

Our hybrid IT approach

As trusted advisors, we help customers identify key infrastructure transformation opportunities, through strategy and advisory services that include accelerated transformation workshops and roadmaps. We assess and migrate our customers' enterprise platforms and infrastructure to cloud services to enable digital solutions—including storage, networks, applications workplace and analytics. We enable our customers to offer modern IT services by integrating multicloud services and traditional infrastructure to achieve the most of their existing IT estate, while gaining greater operational and financial control.

Our next-generation cloud computing and infrastructure offerings

- **Cloud advisory services:** Develop a clear cloud strategy and path towards hybrid IT and multi-cloud computing across your organization
- **Workload migration services:** We apply minimally disruptive migration tools and methods to suit a broad array of customer needs for private and public cloud solutions
- **Service integration and management/ITSM/ITOM:** A digital platform to adopt a multi-sourcing supplier strategy to cover IT service needs in this hybrid IT and multi-cloud era

Benefits

- Increase IT automation to lower costs
- Improve end-to-end data protection and governance
- Simplify management across data center and cloud
- Improve application and system performance
- Manage multi-cloud environments
- Enable DevOps deployment

- **Public cloud solutions:** Public cloud solution sets that enable Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) services using Microsoft Azure and AWS commercial, government, DoD and secret clouds
- **Private and hybrid cloud solutions:** Build your own cloud and bridge services with an integrated IaaS solution that provides the agility, speed and security needed to compete in the digital economy
- **Storage services:** Store and manage your data in the most appropriate environment across traditional data center, cloud and hybrid storage

Our traditional mainframe, compute and network service offerings

- **Mainframe services:** Around-the-clock operation and support of the IBM z/Series mainframe platforms
- **Compute services:** Deployment and daily delivery of compute platform environments in your data center, consisting of monitoring and management of hardware and system software configurations

- **Network services:** Manage your advanced network infrastructure and cloud access points with our leading industry partners, including Verizon, HPE/Aruba, F5, Cisco and Riverbed

Why Perspecta

- Trusted partner of our government customers for more than 50 years with a vested interest in their transformation success
- Deep pool of highly skilled, cleared talent providing high quality cloud engineering and architects at scale
- Cloud solutions with cybersecurity built in, not bolted on, to achieve agency compliance requirements
- Advisory sessions and tactical workshops that output a path forward with unique insight for cloud transformation
- Integrated partner ecosystem, bringing world-class commercial technology and cost-effective solutions aligned with your mission needs
