

# Managed business intelligence and analytics

Boost your analytic team's capabilities and effectiveness

Effective data management is vital to making data-driven decisions. Enterprises committed to expanding their analytic capabilities need the right data management and data science skills. New sources of data, the ability to maintain consistency and the increasing need to access business data require both technology solutions and the right resources to drive insights and mission agility; and it is difficult to scale an in-house analytics team to cope with the rapid mission or business demands. Traditional analytic technologies and structures may simply not be adequate to meet data analytics and user requirements. How will you scale your data management and analytics team to adopt solutions to meet your dynamic changing business demands?

The adoption of managed data and analytic service models provide organizations with the capability to drive mission goals, increase efficiencies, address risks and focus on intelligent insights. Managed services give you a cost effective means to augment your team with advanced analytical techniques, tools and skilled resources. Perspecta can help you make sense of your data technology ecosystem, support your analytics projects and provide solutions at speed of mission.

## **Perspecta's managed business intelligence and analytics services**

Perspecta provides data modernization, development, implementation management and support using our industry-recognized Analytics Global Methods (AGM) developed from more than 40 years of customer implementations. We provide skilled staff so customers are able to optimize their

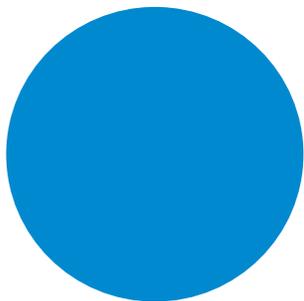

data ecosystem and benefit from the latest innovations in analytics by leveraging resources in advanced data technologies.

We solve your challenging data problems through our comprehensive suite of services and capabilities, including:

- **Data management and analytic resourcing:** Draw on industry-leading analytic staff and processes to expedite analytics-driven outcomes
- **Managed analytics:** Work with a dedicated team to manage your backlog of mission analytics
- **Managed data and analytic operations:** Offload routine data management and analytic model maintenance and free up your data management staff and data scientists to work on strategic projects

## **Key features**

With Perspecta's managed business intelligence (BI) and analytics services, we assist in implementing data management best practices in order to gain efficiency from integrated data curation/quality processes, automation and DevOps. With our advisory and discovery services you have availability to highly skilled technical resources with deep analytics expertise. Across the entire customer journey, providing proven sustainable and future ready technology solutions in addition to consultant-led services. Perspecta brings world class services with a strong foundation of methods, processes and tools through our AGM and a proven ability to execute transformational projects while maintaining business as usual.

### Benefits

- Get immediate support for your data management and analytics needs from industry experts
- Access dedicated teams giving you actionable insights into business operations and environments
- Reallocate your key resources from operational tasks to focus on strategic initiatives

### Transforming data into insight

Organizations committed to ongoing analytics development and deployment are more likely to advance their business objectives. They gain insight, evaluate options, and make effective decisions. Business users want actionable insights; thus analytics teams are expected to deliver results quickly for turning data into actions.

Perspecta's managed BI and analytics services combines data science skills, operations and platform services that give you a cost-effective and flexible delivery approach to deploy analytics. The business benefits include:

- **Expedited outcomes:** Our skilled data analysts, engineering and data scientists synthesize information from initiatives and find actionable insights that accelerate new outcomes
- **Fast-track deployments:** You gain access to our experienced data and analytics experts helping you quickly scale your analytics team—using insights to deploy projects, improving efficiency, reducing risk and fostering innovation
- **Sustained outcomes:** We help you maintain ongoing accuracy and performance of your analytic models

Use data science and analytics to scale operations, gain actionable insights and drive business decisions.

### Why Perspecta

Perspecta brings more than 40 years of experience of business/technology consulting, architecture, onsite support for critical business systems, and infrastructure operations to a wide range of customers. Perspecta has successfully led our customers through the development of complex data integrations to enable analysis and analytics efforts using structured, unstructured and semi-structured information. We have deep experience in designing, building, implementing and supporting big data solutions from start to finish.

Our expertise extends to all leading analytics and data management technologies, including data preparation, comprehensive data management, dashboards, information delivery, BI and analytics on all platforms whether on premise or in the cloud.
