

Managed services for Microsoft Azure

Reap the full benefits of Microsoft Azure, unlock value from IT investments and manage costs, governance and risks

Demands on IT organizations for increased speed and lower costs are fueling a rush to the public cloud. Poor oversight of this decentralized environment often leads to over-provisioning of cloud services, wasteful and unplanned spending and disappointing service levels.

For many enterprises, it's nearly impossible to understand the true scale of costs or compare actual consumption to the services provisioned. Greater visibility and better governance of these growing cloud portfolios are needed.

Full support for Microsoft Azure

Perspecta's managed services for Microsoft Azure provide design, delivery and daily operational support of compute, storage and virtual network infrastructure in Azure. We monitor and manage system software, infrastructure configurations and service consumption using proven processes and tools. In addition, our financial and governance services help reduce uncontrolled consumption.

Azure and Perspecta's managed services scale up and down to continually meet your changing business needs, ensuring that your IT costs and services will always align to business demand.

We help you realize the full financial and operational benefits of Azure through end-to-end services. These include advisory services to identify workloads suited to migration to the cloud, and transformation and cloud migration services to take the risk out of moving core applications with complex enterprise workloads.

We offer managed service bundles suited to meet customer-specific IT and financial

objectives. Whether you have critical workloads that demand a full suite of services or you're just looking for a light-touch service to control costs—we can scale and align to meet your needs.

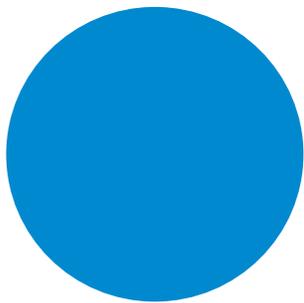

Perspecta is uniquely positioned to support Azure. Our seasoned expert advisors, specialized tools and services for risk mitigation, security and regulatory compliance can help you achieve savings while reducing enterprise risk.

Proven success with Azure

Our managed services for Microsoft Azure are helping customers easily consume Azure services and benefit through flexible consumption-based models, such as infrastructure as a service and platform as a service. In addition to managing costs, these organizations are benefiting from agile development and deployment of cloud-native applications.

Our experience includes:

- A large agency chose Perspecta as their cloud service provider to migrate their primary website to Microsoft Azure. The new cloud implementation has improved website response time and provides the agency with enhanced scalability
- For a federal customer, Perspecta leverages Microsoft infrastructure as a code automation platform to scale Azure by horizontally expanding to meet user demand, as well as scaling up and down to be as efficient as possible
- A large state and local customer selected Perspecta to migrate a significant portion of their on-premise data center environment to Microsoft Azure. Perspecta assisted this customer to outline a hybrid strategy and worked to migrate each workload seamlessly

Benefits

- Accelerate your move to consumption-based IT as a service
- Actively manage costs and reduce public cloud sprawl
- Improve cloud architecture, governance and ongoing support
- Access end-to-end Azure services—advisory, cloud migration, managed services and security

Perspecta in the Microsoft Cloud

- 1,600 Microsoft certifications, 2,000 Lean Six Sigma certifications and 1,000 agile certifications
- Microsoft Azure preferred partner, Microsoft Gold Certified Partner, cloud solution provider (CSP) and managed services provider (MSP)
- Global Microsoft licensing solution provider
- Microsoft Office 365 and Enterprise Mobility and Security (EMS) partner

Multiple service options

Perspecta offers advisory services and two bundles of managed services.

Advisory services: Quickly assess your current state

- Analyze an existing Azure environment to align to security, compliance, flexibility and scalability needs
- Ensure that the Azure architecture is optimized for the workloads expected
- Make architecture changes as needed

Silver service bundle: Manage your own Azure environment with access to skilled resources and tools

- Azure financial analysis, management and reporting and financial best practices
- Perspecta account services, including governance and collaboration
- Light-touch service management engagement with Perspecta service management experts on request
- Service costs that scale with your need

Gold service bundle: Get all the features of the silver service bundle, plus full managed services

- Infrastructure configuration
- Integrated IT service management of workflow, automation and governance
- Management of virtual machines, storage and guest OS, including patching and availability management
- Security management, including Active Directory, firewall, traffic manager, virtual network, anti-virus and backup/restore
- Service costs that scale with customer need

Our service bundles are designed to align to workload needs. For example, a full-scale managed service may not be needed for development or test workloads. Our services bring best practices and governance to the public cloud so you can be confident in moving the most critical workloads to the cloud, deriving the value and agility you expect.

Our approach to Azure is as nontraditional as the cloud itself. Traditional silos for storage, compute and networking are replaced with a fully skilled, end-to-end “CloudOps” delivery capability. We recognize that cloud, compute, storage, virtual networking and security are a set of integrated processes.

Leading Microsoft partner

Perspecta managed services for Microsoft Azure are built on our 30-year global strategic partnership with Microsoft. We support Microsoft’s mission to empower every person and organization on the planet to do more and achieve more.

Perspecta helps customers unlock value in their IT investments and take full advantage of the digital economy. We can cost-effectively integrate public cloud, private and virtual private cloud and on-premises computing into an effective whole. Our team of 14,000, of which more than 46 percent is cleared, is ready to advise you on bringing cost transparency, governance and operational excellence to the public cloud.
