

# Retirement plan management

Comprehensive pension administration for the public sector

## Benefits

- Built-in not bolt-on security
- Turnkey or custom solution
- Vendor independent
- Infrastructure and hosting capabilities

Pension plan management is a complex business. And with an aging workforce, keeping up with the pace of change while maintaining the highest level of security makes your job even harder.

## Perspecta's retirement plan management solution

With Perspecta, you can provide your plan members with a responsive, creative solution that meets their user-centric demands while ensuring that their money stays safe.

Our retirement plan management solution is a comprehensive web-based record-keeping application for public sector customers that touches the entirety of a person's working life—tracking everything from salary and time to contributions and actions—from the day they begin their public service careers through retirement.

The pre-configured application framework offers ease of deployment and the flexibility to tailor the solution to your business and IT environment. Utilizing technology that

delivers to your specific technical needs provides the most efficient use of current and future IT dollars.

Through a service oriented architecture, your agency has the flexibility to easily adapt to changes as new technology emerges and older technology reaches end of life. And our vendor-independent approach allows you to decide what you want to upgrade or replace and when without the costly investment of having to replace any other component of the system.

## Why Perspecta

At Perspecta, we understand the demands you face, and we've been helping pension funds like yours manage these challenges for more than three decades. As a leader in systems integration and cybersecurity, we can deliver a cost-effective, secure solution specifically tailored to your needs like never before.
