Application transformation workshop

Experience your transformation in one day

Organizations who have successfully transformed to an IT-enabled model are realizing revenue growth, the ability to support new products and services, increased customer satisfaction and improved brand reputation.

But getting there isn't always that simple. If you are struggling to become an IT-enabled business, you are not alone. Many organizations struggle with cloud and mobility projects as they discover unanticipated dependencies of their existing IT along the way. These findings often require new modernization and integration projects in their own right—impacting security, budget and resources.

Determining the right path to resolve all of these issues is difficult. Especially if your organization has not reached a consensus on what transformation could do for you, do not understand what your transformation journey might look like, and do not have collective enterprise-wide support of these plans.

What if, before taking your next step, you could see into the future and understand the opportunities and risks? What if you could know what achievements could be possible—and how to get there in just one day?

Leveraging workshops to look into the future

The Perspecta application transformation workshop is designed to accelerate your transformation by providing foresight of what could be to come after a successful transformation.

Leveraging our extensive experience and innovative approach to managing applications environments, you can improve business performance by up to 25% and reduce your application and infrastructure

costs between 30-60% percent. We do this by reducing dependencies of legacy infrastructure, applications and scarce and expensive skills to free up valuable IT resources for new initiatives that reduce business and operational risks.

In our interactive, hands-on workshop you'll get to experience what a successful transformation could look like for your organization. In the workshop you will:
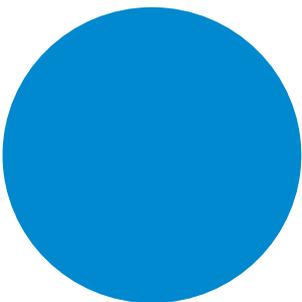

- Reach consensus on the benefits and outcomes you could realize through applications transformation

- Walk away with a preliminary roadmap of your applications transformation journey

- Understand the quick hits and early wins you will want to focus on for positive momentum and early results

- Gain insight into the most important issues and obstacles you will need to address, get buy-in on, and focus on for successful outcomes

How it's done

This one-day, presentation-free workshop is customized to your needs and issues. Led by experienced Perspecta consultants, we bring together key IT and business leaders to help you experience your personal transformation journey. This journey takes you through nine critical stages of focus, where you resolve what you need to focus on to have a successful transformation program.

Stage 1: Setting the scene
At the beginning of the workshop, we'll drive a discussion around your motivations for transformation, whether you're taking a strategic or tactical perspective, your

perspecta ™

applications and IT maturity, and examples of what we mean by transformation. We discuss the concepts behind 'systems of record' and 'systems of engagement', laying the foundation for the rest of the workshop.

Stage 2: Know the business context

Transformation requires knowledge of and alignment to organizational strategies and goals. At this stage, you define the objectives for your transformational "to-be" state.

Stage 3: Expose the realistic as-is state

Successful transformation requires a realistic and complete look at your current state. This includes issues and challenges you deal with inside of IT; issues and challenges the business has in dealing with IT; and IT resources aligned to your business strategies and the business value they support.

Stage 4: Adopt an architecture

Here IT strategy and architecture, business architecture, industry frameworks and reference architecture frameworks are discussed. Also covered are cloud-reference architectures, security and applications, and how they change the way your business and IT teams work together.

Stage 5: Transform

Transformation programs succeed when the right modernization and transformation strategies are applied to each IT domain. It is necessary to understand the choices, know how well equipped you are for transformation, understand the implications of aggressively implementing cloud and mobile strategies, and deciding on the right strategies for you.

Stage 6: Manage the transformation

Successful transformation is realized through a solid program and program management, agile governance and supporting management of change initiatives. To do so, you need to know your organizational maturity areas, incorporate best practices for managing success with clear roles and responsibilities.

Stage 7: Get end-to-end portfolio life cycle management

Topics discussed at this stage include all elements of the application life cycle, all to ensure your organization doesn't repeat the same experience.

Stage 8: Know that outcomes matter

It is important that your transformation roadmap include tangible and measurable business outcomes. Key topics include your top priorities, timeline and metrics; how projects contribute to business outcomes; what business outcomes are not supported by your transformation initiatives; and more.

Stage 9: Build the roadmap

To achieve your "to-be" state, a roadmap of projects— each being actionable and achievable—is required. This includes integration and prioritization, so program success is visible early, and early savings can fund later transformation projects

IT-enabled is the answer

The IT-enabled enterprise is capable of amazing speed and remarkable flexibility. It can address market opportunities and competitive threats; it can roll out new products and services quicker than before; and it has higher levels of customer satisfaction and brand recognition, resulting in revenue growth. IT-enabled business processes also mean employees are more efficient and effective.

Applications transformation is key to getting there—and ensuring your applications are prepared to support the speed and functionality required starts with our workshop.
